

ELECTRICAL DEVICES EMPLOYING MOLTEN COMPOSITIONS OF BIOMOLECULES

5

Abstract of the Disclosure

Compositions of biomolecules such as nucleic acids that form molten salts are provided. These compositions molten compositions that have useful electrical properties. Such compositions include a salt of (i) an organic polymer ion such as a polynucleic acid anion, and (ii) a polyether or polysiloxane couterion. Methods of making and using such compositions, along with electrical devices such as memory devices, are also provided.
